

SUJAY KUMAR SUMAN

Software Engineer

+918146594223 • sujaykumar.dev@gmail.com • <https://linkedin.com/in/sujaykumarsuman>

Summary

Software Engineer with 4+ years of experience building distributed systems, cloud-native platforms, and backend services in Go. Experienced in designing microservices, Kubernetes control planes, and automation tooling focused on scalability, reliability, and operational excellence.

Education

University of Engineering, Chandigarh University

08/2017 - 06/2021

B.E. in Computer Science and Engineering | GPA: **7.4** / 10

Skills

Programming: Programming: Go • Python • Shell • SQL • C++

Core Knowledge: Microservices • Distributed System • System Design • Algorithms • Data Structures

Cloud & Infrastructure: Kubernetes • AWS • Docker • Helm • Microservices • Linux

Data & Messaging: PostgreSQL • Redis • DynamoDB • Kafka

Networking & Storage: Consul • IPSec • VxLAN • OVS • Object Storage (S3, MinIO)

DevOps & Automation: CI/CD • GitHub Actions • Jenkins • FluxCD • Kubevela • Crossplane • Terraform • Infrastructure as Code

Experience

HashiCorp

Bengaluru, IN

Engineer 2

03/2025 - Present

- Led security remediation by **fixing over 500 high-severity vulnerabilities** in HCP Consul before sunset, ensuring a secure transition for enterprises.
- Delivered the **configurable Virtual IP** feature, a core capability that enables the dynamic configuration of IP addresses allocated within a mesh gateway using **CIDR ranges** for internal routing.
- Enhanced API Gateway functionality by designing and integrating a feature allowing API gateways to correctly **honor and route traffic based on subsets** defined within service routers, optimizing granular traffic control.
- Introduced **enterprise census reporting** within Consul, which uses **Raft-based consensus** for reliable license utilization tracking, with new export functionalities for CRM and secure file sharing.
- Improved Consul scalability by implementing randomized **ACL login staggering**, enhancing **load distribution** in large Kubernetes clusters with **900+ nodes**.
- Ensured Product Reliability: Provided **on-call support** for both HashiCorp Cloud Platform (HCP) and self-managed enterprise customers, **resolving several high severity issues** to maintain high reliability for the service mesh and discovery services.

Infoblox

Bengaluru, IN

Software Engineer 2

08/2022 - 02/2025

- Developed db-controller to enable **RDS instance management via Kubernetes CRDs**, successfully migrating all existing services to utilize this unified database request system
- Established a GitOps-based workflow for resource requests using **FluxCD** and **KubeVela**, which automated AWS provisioning with **Crossplane** (EKS, Redis, DynamoDB) and reduced cluster creation time to **under 2 hours**
- Designed and built **Go-based Kubernetes controllers** and supporting microservices for a new SaaS DDI solution, managing **IPSec, VxLAN, and OVS** traffic routing for secure connectivity and seamless migration from on-prem systems
- Built internal **CLI tooling** to manage and debug SaaS service components (controllers and CRDs), simplifying complex kubectrl steps and significantly reducing troubleshooting time during development and production incidents
- Documented the entire FluxCD/Kubevela workflow and cluster setup process to assist with new team onboarding and **promote Infrastructure as Code best practices** across the organization

Nokia Solutions & Networks

Bengaluru, IN

Developer

08/2021 - 07/2022

- Architected a **Go package replacing MinIO with pluggable storage backends**, including unit, integration, and performance tests; **adopted across all services** to streamline storage backend integration
- Implemented **REST APIs for redundancy synchronization** and extended SNMP protocol for HMS end-of-service notifications, using OpenAPI, MariaDB, and Elasticsearch
